

Dynamic Carbon Credits - Management Balance Sheet Summary

As of December 2025 | Internal management estimate | Prepared for strategic, investor, lender, and buyer discussions

Asset Category	Valuation Basis	Management Estimated Value
Carbon credit inventory	3,400,000 credits at recent average selling price of \$125 per credit.	\$425,000,000
Seed inventory and seed-production pipeline	Proprietary seed inventory, self-multiplying genetics, nursery/field-ready propagation stock, and seed-bank reserves supporting future carbon-credit production capacity.	\$575,000,000
Proprietary plant / biological system IP	Management estimate for proprietary plant genetics, carbon-capture biology, cultivation know-how, trade secrets, field protocols, and commercialization rights.	\$350,000,000
Owned land base	Approximately 10,000 acres deeded or controlled for operations, production, seed expansion, and credit generation.	\$80,000,000
First right of refusal land-position value	Approximately 3,000,000 acres under first right of refusal / strategic land pipeline; value reflects development optionality and future production rights, not full fee-simple ownership.	\$300,000,000
Equipment, field infrastructure, and operating systems	Carbon-credit production equipment, agricultural systems, processing infrastructure, monitoring systems, vehicles, and deployment assets.	\$115,000,000
Data, verification, documents, and buyer pipeline	Project records, production data, monitoring assets, validation documentation, sales pipeline, and buyer relationships.	\$100,000,000
Total Estimated Asset Value		\$1,945,000,000

Estimated Liabilities / Reserves	Management Estimate
Operating payables, accrued expenses, and current obligations	\$15,000,000
Equipment notes, leases, and secured operating debt	\$40,000,000
Development, verification, legal, tax, and registry reserves	\$25,000,000
Forward-credit delivery and buyer-performance reserve	\$75,000,000
Total Estimated Liabilities / Reserves	\$155,000,000
Estimated Net Asset Value / Equity	\$1,790,000,000

Strategic valuation emphasis: A substantial portion of Dynamic Carbon Credits' asset value is assigned to the seed inventory, seed-production pipeline, and proprietary plant system because those assets are the foundation for scalable future carbon-credit production. The seed inventory is not treated as a commodity seed stock; it is treated as a controlled production asset tied directly to future acreage deployment, credit generation, and enterprise buyer supply capacity.

Important note: This is a management-prepared balance sheet summary and is not an audited GAAP financial statement. Values for seed inventory, proprietary plant/IP, first-right-of-refusal land positions, carbon-credit inventory, and future production capacity should be supported by independent appraisal, legal review, verification documentation, and buyer contracts before being used for financing, tax, securities, or regulated reporting purposes.
