

INDEPENDENT CERTIFICATION STATEMENT

16th May 2025

Dynamic Carbon Credits

SUBJECT: INTRODUCTION AND OBJECTIVE OF WORK

The DCC proprietary plant demonstrates an innovative carbon sequestration approach, integrating biochar application, soil management, and microbial treatment.

The objective of this certification statement is to independently verify and provide limited assurance on the accuracy and completeness of the tons of carbon sequestered by the multi-phase sequestration model applied to 355.6 acres of land for the year 2019, 2020 and 361 acres of land for the years 2021 to 2024. The report also includes the total tons of carbon sequestered during the six-year tenure of 2019 to 2024 from voluntary initiative.

INTENDED USER

The certification statement is made solely for “**Dynamic Carbon Credits**” as per the governing contractual terms and conditions of the Certification Engagement Contract between the “Dynamic Carbon Credits” and Enviance Services Private Limited (hereafter referred as Enviance). We owe no responsibility and do not accept any liability to any other party other than “Dynamic Carbon Credits” for the work we have performed for this certification report or our conclusions stated in the paragraphs below:

SCOPE OF WORK

The certification process was conducted using internally defined protocols built on the requirements of the ISO 14040 and 14044 used in the submitted LCA report and other relevant ISO requirements. The scope of work included:

- Data and information included in project description document submitted for each year for the six-year tenure of 2019 to 2024.
- Reviewing the LCA report methodology and data collection processes.
- Assessing the reliability and appropriateness of the calculation methodologies used.
- Examining the accuracy and completeness of the reported tons of carbon sequestered data.
- Reviewing supporting documentation, including the third party verified LCA report.
- Evaluation of the Report against the following principles where possible and needed for any non-financial reporting:

1. Inclusivity

2. Materiality

3. Accuracy

4. Comparability

LEVEL OF ASSURANCE

The level of assurance has been applied as “Limited” covering period from the year 2019 to 2024.

METHODOLOGY USED TO CONDUCT THE CERTIFICATION

As part of its independent certification, Dynamic Carbon Credits initially submitted the project description document and LCA Report to Enviance, detailing the reporting boundary.

Assessment Team

1. Pankaj Kumar – Team Leader

2. Ritika Yadav – Team Member

Technical Reviewer

1. Mr. Vijayanand

Enviance Services Private Limited undertook the following activities

1. Review of documentary evidence produced by Dynamic Carbon Credits for the years 2019 to 2024.
2. Accuracy of all relevant data used from the LCA report.

Enviance has reviewed the quantification methodology used by Dynamic Carbon Credits for the years 2019 to 2024 and confirms the same to be in line with the accepted practice of standard GHG computations. The work was conducted against the requirements of ISO 14040 and 14044 used in the submitted LCA report and other relevant ISO requirements.

The conclusions of the assessment team were then reviewed by an Independent Technical Reviewer for the correctness of the reported values and usage of emission factors before the issuance of the Certification Statement.

OUR CONCLUSION

In accordance with our methodology and the actions outlined previously, we believe that there are no matters or findings that have come to our attention indicating any significant issues with **Dynamic Carbon Credits** for the years 2019 to 2024.

The GHG assertion provided by the Project Proponent and verified by Enviance has resulted in the total carbon sequestration of **2,998,422** tons of Carbon per life cycle during the six-year tenure from 2019 to 2024 as reported in the table below:

Year	Area Of Land	tons of Carbon per life cycle
2019	355.6 acres	494,728.5
2020	355.6 acres	494,728.5
2021	361 acres	502,241.25
2022	361 acres	502,241.25
2023	361 acres	502,241.25
2024	361 acres	502,241.25
Total		2,998,422.00

An average sequestration rate of 1391.25 tons of carbon per acre per life cycle exists for each year during the six-year tenure of 2019 to 2024.

The project aligns by contributing to SDG 12, SDG 13 and SDG 15. The project demonstrates moderate alignment with SDG 12 (Responsible Consumption and Production), particularly targets 12.2 (sustainable management of natural resources) and 12.4 (environmentally sound management of chemicals and wastes) through sustainable land resource management and maintaining average rate of carbon efficiency at 1391.25 tons of carbon per acre per life cycle, reflecting responsible resource utilization. It demonstrates strong alignment with SDG 13 (Climate Action) targets 13.1 (strengthen resilience to climate related hazards) and 13.2 (integrate climate change measures into policies and planning) by generating carbon credits through the sequestration of **2,998,422** tons of carbon over six years tenure of 2019 to 2024 directly contributing to resilience and climate action. Additionally, the project shows strong alignment with SDG 15 (Life on Land) targets 15.1 (conservation and restoration of terrestrial ecosystems), 15.2 (sustainable forest management), and 15.3 (combat desertification and restore

degraded land) by generating carbon credits on the basis of land-based project which leads to land conservation and ecosystem maintenance.

LIMITATIONS AND EXCLUSIONS

Excluded from the scope of our work is any certification of information relating to:

- Our certification does not extend to the activities and operations beyond the Dynamic Carbon Credits team for the years 2019 to 2024.
- This independent statement should not be relied upon to detect all errors, omissions, or misstatements that may exist within the supporting documentation.
- Our certification engagement was performed within the scope and time constraints agreed upon with the Dynamic carbon credits which limits all the potential issues related to GHG Inventory.

UNCERTAINTY

The reliability of certification is subject to uncertainty(ies) that is inherent in the certification process. Uncertainties stem from limitations in the accounting and quantification models used, assumptions made, emission factors used, or may be present in the estimation of data used to arrive at results or values like surveys and where samples are verified. Our conclusions with respect to this certification are naturally subject to any inherent uncertainty(ies) involved in the certification process.

STATEMENT OF INDEPENDENCE, IMPARTIALITY AND COMPETENCE

Enviance Services Private Limited is a third-party Validation-Verification Body and performed this engagement considering the requirements of ISO 14040 and 14044 used in the submitted LCA report and other relevant ISO requirements and has implemented a Code of Ethics across the business to maintain high ethical standards among staff in their day-to-day business activities.

In addition, no certification team member has a business relationship with Dynamic Carbon Credits, or officials beyond what is required of this assignment. We have conducted this certification independently and there have been no conflict of interest.

The certification team has extensive experience in conducting certification over environmental, social, ethical, and health & safety information, systems, and processes and an excellent understanding of Enviance Services Private Limited standard methodology for the Certification of any non-financial Reporting.

On behalf of Enviance Services Private Limited

Pankaj Kumar
(Director and Technical Team Leader)
