

Carbon Credit Program

Executive Summary

15-30%

Savings on Tax Liability

\$1 : \$1

Dollar-for-Dollar Tax Offset

90 Days

Crop Cycle to Carbon Capture

Bottom Line: A business or individual owing \$10M in federal tax purchases \$10M in 45Q credits for ~\$7M–\$8.5M — eliminating the entire tax liability and generating a net savings of \$1.5M–\$3M.

How It Works & The Science Behind It

- ✓ Agricultural CO2 capture and permanent underground storage — no recapture risks
- ✓ Biomass converted to biochar via pyrolysis, locking carbon in soil for centuries
- ✓ Verified removals issued as credits representing real CO2 permanently removed
- ✓ Proprietary crop from 5 tree species — seed to harvest in approximately 90 days
- ✓ Deep soil sampling to 60 ft with continuous monitoring verifies storage
- ✓ Federal government issues 45Q credits; owners transfer at 70¢–85¢ per dollar

Buyer Protections & Safeguards

3× Redundancy

Triple redundancy reserves backing every credit transaction

Seller Indemnity

100% seller responsibility for pre-transfer recapture or compliance failures

Replace or Refund

Invalidated credits replaced with equivalent type & vintage — or full refund

Audit & IRS Coop.

Annual third-party audits; seller provides documentation for examination

Why Buyers Invest with Confidence

IRC §45Q Statutory Basis

Federal statute backing direct air capture and mineralization storage

Clean Transfer — §6418

No equity, no K-1s, no project ownership — standalone tax attribute

No Passive Activity Limits

§469 does not apply — credits offset active income under §38

IRS Approved

Transfer validity and §469 non-applicability confirmed without limitations

Verified Carbon Storage

Lifecycle analysis, third-party validation, and continuous MRV monitoring

Structural Separation

Fixed cash consideration only — no profit-sharing or project linkage
